CONTENTS

VISION

To create competent mechanical engineers capable of working in diversified disciplines for transformative impact on societal progressive development in the field of mechanical engineering through creative research and lifelong learning.

MISSION

- To impart excellent education by proving state of art research facilities in the field of mechanical engineering.
- To develop alliances with industries and other organizations for excellence in teaching learning process, research and consultancy projects.
- To enhance the students in intellectual, entrepreneurial and ethical challenges through active participation by critical thinking.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** The graduates will be able to apply the overall knowledge of Mechanical Engineering along with concepts of Mathematics, Science, Communication and Computing skills to understand specific problem areas and finding the optimal solutions for the same.
- **PEO2:** The graduates will be able to implement ideas of Mechanical Engineering for the challenging tasks in the interdisciplinary areas like Electrical, Electronics, Computer Science, Civil, Bio-Technology and allied branches.
- **PEO 3:** The graduates will be widely talented in the fields of manufacturing, service and design industries, which will not only improve their employability but also aid in establishing the above said industries.
- **PEO 4:** The graduates will develop lifelong learning attitudes, ethics and values that will help their career employability and growth in engineering, academia, defence, state and central government sectors.

PROGRAM OUTCOMES (POs)

Graduate Attributes	PO #	Program Outcomes
Engineering knowledge	1	Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex mechanical engineering problems
Problem analysis	2	Identify, formulate, review research literature, and analyze complex engineering problems in Mechanical Engineering reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
Design / Development	3	Design solutions for complex engineering problems and design system components or processes of Mechanical Engineering that meet the specified needs with appropriate consideration for the public health

of Solutions		and safety, and the cultural, societal, and environmental considerations.
Conduct Investigations of Complex Problems	4	Use research-based knowledge and research methods including design of experiments in Mechanical Engineering, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
Modern tool usage	5	Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities in Mechanical Engineering with an understanding of the limitations
The Engineer and society	6	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice in Mechanical Engineering.
Environment and sustainability	7	Understand the impact of the professional engineering solutions of mechanical Engineering in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
Ethics	8	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
Individual & team work	9	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
Communication	10	Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
Project management and finance	11	Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
Lifelong learning	12	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

After successful completion of mechanical Engineering Program, the graduates will be able to:

PSO1	Specify, fabricate, test and operate various machines along with essential documentations.
PSO2	Analyze, design, develop and implement the concepts of mechanical systems and processes towards product development

Course Outcomes: At the end of the Course, the Student will be able to do the following:

19MEE31.1	Use appropriate numerical methods to solve algebraic equations and transcendental equations
19MEE31.2	Evaluate a definite integral numerically and Use appropriate numerical methods to solve Boundary Value Problems in Partial differential equations
19MEE31.3	Fit a suitable curve by the method of least squares and determine the lines of regression for a set of statistical data and obtain the extremal of a functional.
19MEE31.4	Express the periodic functions as Fourier series expansion analytically and numerically
19MEE31.5	Solve the Continuous model problems using Fourier transforms
19MEE31.6	Differentiate the physical problems numerically

Course Syllabus			
Module No.	**Contents of the Module**	**Hours**	**Co's**
1.	**Numerical Methods-1:** Numerical solution of algebraic and transcendental equations: Regula-falsi method and Newton-Raphson method-Problems. Interpolation: Newton's forward and backward formulae for equal intervals, Newton divided difference and Lagrange's formulae for unequal intervals (without proofs)-Problems.	**9L + 2T**	**19MEE 31.1**
2.	**Numerical Methods-2**: Numerical integration: Simpson's 1/3rd rule, Simpson's 3/8th rule, Weddle's rule (without proofs)-Problems. Numerical solution of one-dimensional wave equation, heat equation and two-dimensional Laplace's equation. **Applications:** Application of numerical integration to velocity of a particle and volume of solids.	**9L + 2T**	**19MEE 31.2**
3.	**Statistical Methods and Calculus of Variation:** Fitting of the curves of the form $y = a + bx$, $y = a + bx + cx^2$, $y = ae^{bx}$, $y = ax^b$, and $y = ab^x$ by the method of least square-Problems. Correlation and Regression lines - Problems. Variation of a function and a functional, variational problems, Euler's equation and Isoperimetric problems. **Applications:** Minimal surface of revolution and Hanging cable.	**9L + 2T**	**19MEE 31.3**

4.	**Fourier series:** Periodic function, Dirichlet's conditions, Fourier series of periodic functions of period 2π and arbitrary period $2l$, half range series-Problems. **Applications:** Fourier series and half Range Fourier series of periodic square wave, half wave rectifier, full wave rectifier, Saw-tooth wave with graphical representation, practical harmonic analysis-Problems.	9L + 2T	19MEE 31.4
5.	**Fourier Transforms:** Infinite Fourier transforms, Fourier Sine and Cosine transforms, Inverse Fourier sine and cosine transforms. **Numerical Differentiation:** Derivatives of first order and second order using Newton's forward differences and Newton's backward Differences.	9L + 2T	19MEE 31.5 19MEE 31.6

Course Outcomes: At the end of the Course, the student will be able to:

19MEE341/441.1	Understand various manufacturing processes relevant to casting, forging and joining techniques.
19MEE341/441.2	Determine the affect of gates, riser and runners in foundry operations for suitable applications.
19MEE341/441.3	select the suitable moulding and casting processes
19MEE341/441.4	Recommend the suitable type of melting furnaces
19MEE341/441.5	Empathize various concepts of forging and joining techniques for required materials.
19MEE341/441.6	Identify various defects in casting, forging and joining process through NDT methods.

1	Introduction: Concept of Manufacturing process, its importance Classification of Manufacturing processes. Introduction to Casting process & steps involved. Components produced by casting process. Advantages & Limitations of casting process. Patterns: Definition, functions, Materials used for pattern, various pattern allowances and their importance. Classification of patterns, BIS color coding of Patterns. Binder: Definition, Types of binder used in moulding sand. Additives: Need, Types of additives used and their properties	7	**19MEE 341/ 441.1**
2	Moulding sand mixture ingredients for different sand mixtures. Method used for sand moulding, such as Greensand, dry sand and skin dried moulds.Cores: Definition, Need, Types. Method of making cores, Binders used, core sand moulding. Concept of Gating &Risers: Principle and types. Fettling and cleaning of castings: Basic steps, Casting defects, Causes, features and remedies. Inspection Methods – Methods used for Inspection of casting and welding. Visual, Magnetic particle, Fluorescent particle, Ultrasonic, Radiography, Eddy current, Holography methods of Inspection.	7	**19MEE 341/ 441.2,4,6**
3	Special moulding Process: Study of important moulding processes, No bake moulds, Flask less moulds, Sweep mould, CO2 mould, Shell mould, Investment mould. Metal moulds: Gravity die-casting, Pressure die casting, Centrifugal casting, Squeeze Casting, Slush casting, Thixo-casting and Continuous Casting Processes. Moulding Machines: Jolt type, Squeeze type, Jolt & Squeeze type and Sand slinger, classifications of Melting Furnaces.	6	**19MEE 341/ 441.3**

4	Welding process: Principle of welding, classification, application advantages and disadvantages, welding terminology, edge preparation. Arc welding: Arc welding process, Metal arc welding(MAW) or Flux shielded metal arc welding(FSMAW), Tungsten inert gas welding(TIG), Metal inert gas welding(MIG), Submerged arc welding(SAW), Atomic hydrogen welding(AHW). Soldering and Brazing: Surface cleaning and soldering flux, Types of soldering, advantages and disadvantages, types of brazing, advantages and disadvantages.	7	**19MEE 341/ 441.4,5,6**
5	Forging: Introduction, Classification of forging processes. Forging machines & equipment. Forging pressure and load in open die forging and closed die forging, concepts of friction hill and factors affecting it. Die- design parameters. Material flow lines in forging. Forging defects, Residual stresses in forging. Advantages and disadvantages of forging. Simple problems.	6	**19MEE 341/ 441.5**

COURSE OUTCOMES: at the end of the course, the students will be able to:

19MEE351/451.1	Analyze the simple stresses and strains induced in various bars of different cross sections. Also understand the various mechanical properties of materials in the design of structural members.
19MEE351/451.2	Determine the shear force, bending moment and draw the shear force and bending moment diagrams so as to identify the behavior of beams under various lateral loads.
19MEE351/451.3	Analyze the structural members subjected to bending and shear loads.
19MEE351/451.4	Develop an understanding of analytic methods used in connection with the structural design of columns.
19MEE351/451.5	Design of circular shafts subjected to torsional loads and also elucidate the stresses and strains in thick and thin cylindrical pressure vessels.
19MEE351/451.6	Apply structural mechanics of deformable bodies to solve engineering problems.

Course Code : 19MEE41   **Credits : 03**
L:T:P   : 2:1:0   **CIE Marks : 50**
Exam Hours : 03   **SEE Marks : 50**
Course Outcomes: At the end of the Course, the Student will be able to do the following:

19MEE41.1	Solve initial value problems using appropriate numerical methods
19MEE41.2	Understand the concepts of Complex variables to solve Engineering Problems
19MEE41.3	Understand the concepts of Transformations, Complex integration, Poles and Residuals in the stability analysis of engineering problems
19MEE41.4	Gain ability to use probability distributions to analyze and solve real time problems
19MEE41.5	Apply the concept of sampling distribution to solve engineering problems
19MEE41.6	Use the concepts to analyze the data to make decision about the hypothesis and understand the concepts of logic

1.	**Fundamental Concepts & Definitions:** Thermodynamics: definition and scope, Microscopic and Macroscopic approaches. Applications of Thermodynamics: **Thermodynamic Concepts:** System and its types, Surroundings, boundary and its types, Thermodynamic properties: definition and units, Intensive and extensive properties. Thermodynamic state, state Diagram, path and process, quasi-static process: definition and illustration, cyclic and non-cyclic processes; **Thermodynamic equilibrium:** definition and conditions, Zeroth law of thermodynamics: Statement, and significance. Temperature: concept, two point scales and one point scale, International fixed points. Temperature measurements: Constant volume gas thermometer, Electrical resistance thermometer, thermocouple. Numerical on temperature scales.	9	**19MEE332/ 432.1 19MEE332/ 432.2**
2.	**Work and Heat:** Mechanics definition of work and its limitations. Thermodynamic definition of work; examples, sign convention. Displacement work explanation, expressions for displacement work in various processes through p-V diagrams, Problems on work transfer and heat transfer. **First Law of Thermodynamics:** Joules experiment, equivalence of heat and work. Statement of the First law of thermodynamics, extension of the First law to non - cyclic processes, Internal energy, To prove energy is a property of the system, modes of energy, Specific heat at constant volume, enthalpy, specific heat at constant pressure. Heat transfer for various quasi-static process. Extension of the First law to control volume; steady state-steady flow energy equation, Assumptions for SFEE and some important applications. Numerical on open and closed systems	9	**19MEE332/ 432.1 19MEE332/ 432.2 19MEE332/ 432.3**

Kelvin - Planck and Clausius statement: of the Second law of Thermodynamics; PMM I and PMM II, Equivalence of the two statements; Reversible and irreversible processes; factors that make a process irreversible, reversible heat engines, Carnot cycle, Numerical	9	**19MEE332/432.2 19MEE332/432.4**
4.	**Entropy:** Clausius theorem, Clausius inequality; Statement, proof, application to a reversible cycle. Entropy; definition, a property, change of entropy for irreversible process, principle of increase in entropy of the universe, entropy as a quantitative test for irreversibility, Numerical **Pure Substances:** P-T and P-V diagrams, triple point and critical points. Sub cooled liquid, saturated liquid, mixture of saturated liquid and vapour, saturated vapour and superheated vapour states of pure substance with water as example. Enthalpy of change of phase (Latent heat). Dryness fraction (quality), T-S and H-S diagrams, Numerical.	9	**19MEE332/432.4**
5.	**Ideal gas mixtures**: Ideal gas mixture; Dalton's laws of partial pressures, Amagat's law of additive volumes, evaluation of mass fractions, mole fractions, Expressions for C_P, C_V and Gas constant of the mixture. Numerical on mixtures. **Real Gases:** Introduction. Van-der Waal's Equation of state, Van-der Waal's constants in terms of critical properties, Law of corresponding states, compressibility factor; compressibility chart. Numerical on real gases.	9	**19MEE332/432.5 19MEE332/432.6**

Course Code: 19MEE362/462	**Credits: 03**
L: T: P 2:1:0	**CIE Marks: 50**
Exam Hours: 03	**SEE Marks: 50**

Course Outcomes: At the end of the Course, the student will be able to:

19MEE362/462.1	Understand the properties of fluids to visualize the phenomena like surface tension, viscosity and capillarity etc.
19MEE362/462.2	Compute the lift, drag and moments acting on simple aerodynamic profiles and shapes in inviscid, steady fluid flows.
19MEE362/462.3	Implement the concepts of fluid statics, fluid kinematics and fluid dynamics in the applications of Aerodynamics, Hydraulics, Marine Engineering and Gas dynamics.
19MEE362/462.4	Understand the friction losses and minor losses for fluids flowing through a pipe .
19MEE362/462.5	Apply Continuity and Bernoulli equation to develop the solutions of real time fluid flow problems
19MEE362/462.6	Analyze the types of fluid flow, different flow description and design a flow measuring device to analyze the discharge of fluid.

Course Syllabus			
Module No.	**Contents of the Module**	**Hours**	**CO's**
1.	**Vectors:** Definition of scalar and vector, Vector addition, Subtraction and Multiplication-Dot product, Cross product, Scalar triple product. Orthogonal, Co-planar and Angle between vectors-Problems.	5L	19DMAT 41.1
2.	**Vector Differentiation:** Velocity and Accelerations, Vector differential operator-Gradient of a scalar function, Divergence of a vector function, Curl of a vector function-Problems. Solenoidal and irrotational vector fields-Problems.	5L	19DMAT 41.2
3.	**Linear differential equations with constant coefficients:** Solution of initial and boundary value problems, Inverse differential operator technique for the functions-e^{ax}, $Sin\,(ax+b)$ and $Cos\,(ax+b)$.	5L	19DMAT 41.3
4.	**Laplace Transform:** Definition and Laplace transforms of elementary functions-Problems. Properties of Laplace transforms (without proof) ,Periodic functions(without proof), Heaviside function(without proof) -Problems.	5L	19DMAT 41.14 19DMAT 41.5
5.	**Inverse Laplace Transform:** Inverse Laplace Transform by partial fractions, completing the square method-Problems. Solution of linear differential equations using Laplace Transforms-Problems.	5L	19DMAT 41.6

APPENDIX A Outcome Based Education

Outcome-based education (OBE) is an educational theory that bases each part of an educational system around goals (outcomes). By the end of the educational experience each student should have achieved the goal. There is no specified style of teaching or assessment in OBE; instead classes, opportunities, and assessments should all help students achieve the specified outcomes. There are three educational Outcomes as defined by the National Board of Accreditation:

Program Educational Objectives: The Educational objectives of an engineering degree program are the statements that describe the expected achievements of graduate in their career and also in particular what the graduates are expected to perform and achieve during the first few years after graduation. [nbaindia.org]

Program Outcomes: What the student would demonstrate upon graduation. Graduate attributes are separately listed in AppendixC

Course Outcome: The specific outcome/s of each course/subject that is a part of the program curriculum. Each subject/course is expected to have a set of Course Outcomes

The Graduate Attributes of NBA

Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.

Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Conduct investigations of complex problems: The problems that cannot be solved by straightforward application of knowledge, theories and techniques applicable to the engineering discipline that may not have a unique solution. For example, a design problem can be solved in many ways and lead to multiple possible solutions that require consideration of appropriate constraints/requirements not explicitly given in the problem statement (like: cost, power requirement, durability, product life, etc.) which need to be defined (modeled) within appropriate mathematical framework that often require use of modern computational concepts and tools.

Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern

engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of thelimitations.

The engineer and society: Apply reasoning informed by the contextual knowledge to assess

societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainabledevelopment.

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineeringpractice.

Individual and team work: Function effectively as an individual, and as a member or leaderin

diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clearinstructions.

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinaryenvironments.

Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

BLOOM'S TAXONOMY

Bloom's taxonomy is a classification system used to define and distinguish different levels of human cognition—i.e., thinking, learning, and understanding. Educators have typically used Bloom's taxonomy to inform or guide the development of assessments (tests and other evaluations of student learning), curriculum (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies. **[eduglosarry.org]**
