VISION

To create competent mechanical engineers capable of working in diversified disciplines for transformative impact on societal progressive development in the field of mechanical engineering through creative research and lifelong learning.

MISSION

- To impart excellent education by providing the state of art research facilities in the field of mechanical engineering.
- To develop alliances with industries and other organizations for excellence in teaching learning process, research, and consultancy projects.
- To enhance the knowledge of students in intellectual, entrepreneurial, and ethical challenges through active participation by critical thinking.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: The graduates will be able to apply the overall knowledge of Mechanical Engineering along with concepts of Mathematics, Science, Communication and Computing skills to understand specific problem areas and finding the optimal solutions for the same.

PEO2: The graduates will be able to implement ideas of Mechanical Engineering for the challenging tasks in the interdisciplinary areas like Electrical, Electronics, Computer Science, Civil, Bio-Technology and allied branches.

PEO 3: The graduates will be widely talented in the fields of manufacturing, service and design industries, which will not only improve their employability but also aid in establishing the above said industries.

PEO 4: The graduates will develop lifelong learning attitudes, ethics and values that will help their career employability and growth in engineering, academia, defence, state and central government sectors.

MAPPING OF PEOs TO DEPARTMENT MISSION

Program Educational Outcomes	M1	M2	M3	M4
PEO1	3	2	3	1
PEO 2	2	1	3	1
PEO 3	3	2	2	3
PEO 4	2	2	3	3

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex Mechanical engineering problems

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems in Mechanical Engineering reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes of Mechanical Engineering that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments in Mechanical Engineering, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities in Mechanical Engineering with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the professional engineering practice in Mechanical Engineering.

7. Environment and sustainability: Understand the impact of the professional engineering solutions of mechanical Engineering in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and teamwork: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

The following are the program specific outcomes

PSO 1: Specify, fabricate, test and operate various machines along with essential documentations.

PSO 2: Analyze, design, develop and implement the concepts of mechanical systems and processes towards product development

			Credit Distribution			Overall Credits	Contact Hours	Marks

FIFTH SEMESTER SYLLABUS

MACHINE THEORY AND MECHANISM DESIGN

Course Code	20MEE51
L: T:P	2:1:0
Exams Hours	03

Credits	03
CIE Marks	50
SEE Marks	50

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE51.1	Apply the concepts of kinematics and dynamics to analyze planar mechanisms.
20MEE51.2	Investigate the velocity and acceleration of mechanisms by Analytical and Graphical Methods.
20MEE51.3	Understand the concept of mechanism and design of different machines.
20MEE51.4	Realize the applications of Governors based on specific requirements.
20MEE51.5	Analyze the Problems involving static and dynamic balancing and develop the solutions for the same using Graphical Method.
20MEE51.6	Review the concept of Gyroscopic effect and Visualize the effect of Gyroscopic couple in Different Vehicles. .

Mapping of Course outcomes to Program outcomes

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
20MEE51.1		2												3
20MEE51.2		2	1											3

20MEE51.4	3												1	3
20MEE51.5		2		3										3
20MEE51.6	3			3										3

Ratings: 3 for high, 2 for substantial, 1 for low. To be followed in mapping.

Module No	Contents of Module	Hrs.	Cos
1	**Introduction and Mechanisms:** Definitions of Link, kinematic pairs, kinematic chain, mechanism, structure, degrees of freedom, Classification of pairs. Grashoff's Law, Grueler's Criterion, Inversions of four bar chain, single slider chain and double slider chain. Straight line mechanism-Peaucellier's mechanism, Intermittent mechanism- Geneva wheel mechanism, toggles mechanism. Ackerman steering gear mechanism.	8	20MEE5 1.1
2	**Velocity and Acceleration Analysis of Mechanisms:** Velocity and acceleration analysis of inversions of four bar mechanism, slider crank mechanism by analytical methods. Cam, gear and gear trains	9	201MEE5 1.2 20MEE5 1.3
3	**Balancing of rotating masses:** Balancing of single rotating mass in a single plane. Balancing of several rotating mass in single plane and multiple planes.	9	20MEE5 1.4

4	**Governors and flywheel:** Introduction, types of governors, Centrifugal Governor, Watt Governor, Porter and Hartnell governor Stability, Sensitivity, , lift, Isochronous, Hunting, power& effort, and coefficient of insensitiveness Controlling force, Flywheel	9	**20MEE5 1.5**
5	**Gyroscope:** Introduction, Processional angular motion, gyroscopic couple, Gyroscopic effect of a disc, ship, aero plane, two wheelers and four wheelers.	9	**20MEE5 1.6**

HEAT POWER CYCLES

Course Code	20MEE52		Credits	03
L: T:P	2:1:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE52.1	Apply the theoretical knowledge of internal combustion engines to determine the performance characteristics and draw heat balance sheet of petrol and diesel engines as a team member or as an individual.
20MEE52.2	Develop sustainable solution for thermodynamic cycles of internal combustion engines by applying laws of thermodynamics such that emission norms are attained.
20MEE52.3	Calculate the performance of gas turbines with reheat and regeneration, and discuss the performance of combined cycle power plants.
20MEE52.4	Develop and enhance the sustainable thermal systems as a team, by minimizing the constraints which enables the student to have continuous learning
20MEE52.5	Perform the preliminary design of the major components or systems of a conventional or alternate power plant for sustainable environment.
20MEE52.6	Design a eco friendly room air conditioner and determine the properties of atmospheric air using the psychrometric chart as a tool.

Mapping of Course outcomes to Program outcomes

20MEE52.5	3		3				2							3
20MEE52.6	3		3	2	1		2							3

Ratings: 3 for high, 2 for substantial, 1 for low. To be followed in mapping.

Module No	Contents of Module	Hrs.	Co's
1	**RECIPROCATING INTERNAL COMBUSTION ENGINES**: Concepts of Four-stroke & Two -stroke Engine and **valve timing diagram**, Measurement of air and fuel flow rates, Engine output and efficiency, Engine performance characteristics and factors influencing the same, concepts, problems on Morse test and Heat Balance Sheet, **Concepts of Turbo charger and super charger, Modern developments in IC engines (restricted up to 4 stroke BIOFUELS), Engine emission and legal requirements**. Numerical on performance of IC engine	9	**20MEE52.1 20MEE52.2**

2	**HEAT & VAPOUR POWER CYCLES:** , Air standard cycle (Otto, Diesel, Dual) cycles, Derivation on efficiencies of the cycles, Comparison on air standard cycle , Problems on Otto, Diesel, Dual cycles and MEP , concept of Stirling cycle, Rankine cycle, Rankine cycle with superheat , The Enthalpy Entropy chart , Regenerative cycle ,**binary vapor cycle, combined cycle ,different steam turbine arrangement**	9	20MEE52.3
3	**GAS turbine and jet propulsion :** The practical gas turbine cycle, modification to the basic cycle(with Regenerators and Intercoolers), Derivation on efficiency of Brayton Cycle, Work ratio, Optimum Pressure ratio, Problems on gas turbines. **Nozzle shape critical pressure ratio, Nozzle efficiency, fundamental Problems on nozzle** Jet propulsion, Turbo prop, Turbo jet, **solid propellant and liquid propellant rocket engine,** Ramjet ,**Scramjet**	9	20MEE52.3 20MEE52.4
4	**REFRIGERATION:** Performance of Reversed Carnot cycle, Vapor compression cycles- Effect of sub cooling and super heating, Refrigerating load, Pressure Enthalpy diagram, Vapor absorption cycles, Gas cycles, Liquefaction of gases, Steam jet refrigeration, **Refrigerants- IUPAC nomenclature, types and applications**, Control of refrigerating capacity and problems.	9	20MEE52.5
5	**Heating ventilation and air conditioning system:** Psychometric mixtures, specific humidity, Relative humidity, and percentage saturation, Specific Enthalpy, Specific Heat Capacity and Specific volume of moist air, Dry bulb temperatures. Wet bulb temperatures, Dew point temperatures, Construction and use of Psychometric chart, Different Psychometric process, Air conditioning systems, **design of Cooling towers and its parameters**, duct design Problems on with and without using Psychrometric chart.	8	20MEE52.5 20MEE52.6

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE53.1	Apply basic concepts of Fluid Mechanics to conceptualize working of positive displacement machines and turbo machines
20MEE53.2	Analyze energy transfer through graphical and analytical methods in turbo machines
20MEE53.3	Determine various equipment sizing / design aspects of turbo machines based on engineering requirement.
20MEE53.4	Apply appropriate engineering techniques/methods to characterize the steam-based turbo machines and its thermodynamic analysis.
20MEE53.5	Investigate the concepts as a member of a team and make an effective presentation on the application of suitable turbo machines under / within the specified conditions.
20MEE53.6	Design and analysis of turbo machines by applying the knowledge to practical engineering problems for better sustainable solutions and staying updated with the latest developments.

Mapping of Course outcomes to Program outcomes:

Ratings: 3 for high, 2 for substantial, 1 for low. To be followed in mapping.

Module No	Contents of Module	Hrs.	Cos
1	**Introduction to Turbo machinery :** **Introduction:** Definition of turbo machine, parts of turbo machines, Comparison with positive displacement machines, Classification, Unit and specific quantities, model studies. Efficiencies of turbo machines. Problems. **Energy exchange in power generating machines:** Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems.	9	20MEE53.1 20MEE53.2

2	**Energy exchange in power absorbing machines:** Radial flow compressors and pumps– general analysis, Expression for degree of reaction, velocity triangles, General analysis of axial flow pumps and compressors, degree of reaction, velocity triangles, , Thermodynamics of Turbomachine Problems. **Centrifugal Pumps:** Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, head capacity relationship, Minimum speed for starting the flow, Net positive suction head, Cavitation's, Need for priming. Problems.	9	20MEE53.3
3	**Centrifugal Compressors:** Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, stage efficiency, surging problems. **Axial flow Compressors**: Expression for pressure ratio developed in a stage, work done factor, efficiencies, and stalling. Problems. Steam nozzles:- definition, types of nozzles, steady flow energy equation in nozzles, nozzle efficiency, throat pressure for maximum discharge in nozzle flow or choked flow simple problems on nozzles.	9	20MEE53.4
4	**Steam Turbines:** Classification of steam turbines, Single stage impulse turbine, condition for maximum blade efficiency, stage efficiency, Need and methods of compounding, Multi-stage impulse turbine, expression for maximum utilization factor,	9	20MEE53.4
5	**Hydraulic Turbines:** Classification, Different efficiencies, Pelton turbine – velocity triangles, design parameters, Maximum efficiency. Francis turbine - velocity triangles, design parameters, runner shapes for different blade speeds. Draft tubes- Types and functions. Kaplan and Propeller turbines - velocity triangles, design parameters. Performance Charts Problems.	8	20MEE53.5 20MEE53.6

DESIGN OF MACHINE ELEMENTS-1

Course Code	20MEE54		Credits	04
L: T:P	3:1:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE54.1	understand the basic concepts of stress, strain in uni, bi & amp; tri axial state along with standard codes used in design.
20MEE54.2	Design the machine elements to withstand static and impact loading using different theories of failure.
20MEE54.3	Design for fatigue strength by considering stress concentration into account and design of shafts under fluctuating loads.
20MEE54.4	Design the threaded fastener and power screws to withstand parallel and perpendicular loads for both circular and rectangular base plates.
20MEE54.5	Design different types of joints, keys, couplings and different gears using design data handbook.
20MEE54.6	Design permanent joints like welded and riveted joints for both longitudinal and circumferential joints

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
20MEE54.1	3	3	3	3										3

20MEE54.5	3	3	3	3										3
20MEE54.6	3	3	3	3										3

Module No	Contents of Module	Hrs.	Cos
1	**Static and Impact strength, Modes and theories of failure:** Introduction to normal, shear, biaxial and tri axial stresses, Stress tensor, Codes and Standards (only theory) Numerical on Principal Stresses (2D only). **Static strength:** Numerical on Axial load, Bending load and Torsion load. **Impact Strength:** Derivation of instantaneous stress due to axial impact and numerical, effect of inertia. **Modes and Theories of Failure:** Modes of Failure: Fatigue, creep, Ductile, Brittle, Wear, Corrosion. (Theory), Maximum normal stress theory, Maximum shear stress theory, Distortion energy theory, Coulomb mohr theory. Numerical on Maximum normal stress theory, Maximum shear stress theory, Distortion energy theory.	9	20MEE54.1 20MEE54.2

2	**Stress concentration, Fatigue strength, LEFM:** **Stress concentration**: Determination of stress concentration factor. **Fatigue strength design:** Introduction to S-N Diagram and Endurance limit, Fatigue strength under fluctuating stresses (Soderberg & Goodman criteria), and stresses due to combined loading and numerical. **Linear Elastic Fracture Mechanics (LEFM):** LEFM concepts, crack tip plastic zone, fracture toughness, fatigue crack growth, Mean stress effects, crack life estimation, notches and their effects. (no numerical)	9	**20MEE54.3**
3	**Design of threaded fastener, riveted joint, welded joint:** **Design of threaded fasteners:** Stresses in threaded fasteners due to initial load and applied load, Numerical on axial load, eccentric load and shear load on threaded fasteners for circular and rectangular brackets. **Design of riveted joints:** Lap joints and butt joints, Design of pressure vessels (Longitudinal and circumference joints), Design of Lozenge joints. **Design of welded joints:** Strength of butt and fillet welds, eccentrically loaded welded joints	9	**20MEE54.4** **20MEE54.6**
4	**Design of Knuckle joint, socket and spigot, power screw:** Design of **Knuckle** joint, **socket and spigot** cotter joint. Design of **power screws**, stresses in power screws, efficiency, and self-locking	8	**20MEE54.5**
5	**Design of spur gear and Helical gear**: Definitions, stresses in gear tooth, Lewis equation and form factor, Design for strength, Dynamic load and wear load. Helical Gears: Definitions, formative number of teeth, Design based on strength, dynamic and wear loads.	9	**20MEE54.5**

PROJECT MANAGEMENT & ENTREPRENEURSHIP

Course Code	20MEE55		Credits	02
L: T:P	2:0:0		CIE Marks	25
Exams Hours	03		SEE Marks	25

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE55.1	Apply basic principles of project management for real time projects
20MEE55.2	Identify the needs, roles and responsibilities of a leader for feasible and optimum allocation of projects.
20MEE55.3	Develop project execution plans for global and virtual projects to meet customer requirements with effective documentation.
20MEE55.4	Apply appropriate techniques for scheduling and evaluation of projects with interpretation of data using Gantt charts and other monitoring techniques
20MEE55.5	Promote entrepreneurship as an individual or as a group by creating awareness on its needs and roles with respect to growth of economic development
20MEE55.6	Develop solutions for barriers in Small scale industries

1	**Basics of Project Management:** Introduction, Definition of project, characteristics of projects, types of projects, need for project management, phases of project life cycle management, project management processes, impact of delays in project completions, roles and responsibilities of project leader, tools and techniques of project management. Project identification process, project initiation, and pre-feasibility study, prioritizing projects, securing and negotiating projects.	5	20MEE55.1 20MEE55.2
2	**Project Planning and Estimation**: Introduction, developing the project management plan, understanding stake holders, communication planning, project meeting management, communication needs of global and virtual project teams, communication technologies, Constructing Work Breakdown Structures (WBS) – scope planning, scope definition, preparation of cost estimation, evaluation of project profitability.	5	20MEE55.4
3	**Purchasing and Contracting for Projects:** Introduction, Purchase Cycle, Contract Management and Procurement Process. **Scheduling, Co-ordination and Control of Projects**: purpose of a project schedule, historical development, uncertainty in project schedules, different	5	20MEE55.3 20MEE55.5

	scheduling techniques bar (GANTT) charts, bar charts for combined activities, Project evaluation and review techniques, PERT planning. Project direction communication in a project, Role of MIS in project control, performance control, schedule control, cost control cases.		
4	**Project Progress and Inventory Management**: Project Balanced Scorecard Approach, Internal project, customer, financial issues, Finishing the project: Project Close-out, Steps for closing the project, Project termination, Project follow-up, nature of project inventory, supply and transportation of materials. **Entrepreneur**: Meaning of Entrepreneur; Evolution of the Concept, Functions of an Entrepreneur, Types of Entrepreneur, Entrepreneur - an emerging Class. Concept of Entrepreneurship - Evolution of Entrepreneurship, Development of Entrepreneurship; Stages in entrepreneurial process; Role of entrepreneurs in Economic Development. Entrepreneurship in India; Entrepreneurship - its Barriers.	5	20MEE55.2 20MEE55.4
5	**Small Scale Industries**: Definition; Characteristics; Need and rationale; Objectives; Scope; role of SSI in Economic Development. Advantages of SSI Steps to start and SSI - Government policy towards SSI; Different Policies of SSI; Government Support for SSI during 5-year plans. Impact of Liberalization, Privatization, Globalization on SSI Effect of WTO/GATT Supporting Agencies of Government for SSI, Meaning, Nature of support. Objectives; Functions; Types of Help; Ancillary Industry and Tiny Industry	5	20MEE55.5 20MEE55.6

MECHATRONICS AND MICROPROCESSORS

Course Code	20MEE561		Credits	03
L: T:P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE561.1	Develop the insight applications of the concepts in Mechatronics and Microprocessors.
20MEE561.2	Analyze signal conditioning system, different amplifiers Multiplexers and Data acquisition
20MEE561.3	Recognize the need and ability to engage in independent study and life-long learning of technology change in Automotive sector.
20MEE561.4	Analysis and develop the systems of mechatronics for the use of engineer and society.
20MEE561.5	Individual and teamwork in developing assembly language programs for competence in technologies for applications in multidisciplinary settings for sustainable products.
20MEE561.6	Life-long learning through individual and team by integration of mechanical system with microprocessors.

Mapping of Course outcomes to Program outcomes:

COMPOSITE MATERIALS

Course Code	20MEE562		Credits	03
L: T:P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE562.1	Identify the suitability of composite materials for various engineering applications.
20MEE562.2	Ensure safe and sustainable processing techniques for composite materials
20MEE562.3	Apply the modern fabrication technique for enhancement of composite properties
20MEE562.4	Examine the micro and macro characteristics of lamina
20MEE562.5	Analyze the influence of size, shape and particle distribution in MMC'S
20MEE562.6	Develop the suitable composite structure for specific application

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
20MEE562.1	3	3											3

20MEE562.4				2										3
20MEE562.5	3	3		2										3
20MEE562.6	3	3	2											

Ratings: 3 for high, 2 for substantial, 1 for low.

Module No	Contents of Module	Hrs.	COs
1	**Introduction to Composite Materials**: Definition, classification and characteristics of composite Materials – fibrous composites, laminated composites, particulate composites. Reinforcements- Fibers- Glass, Silica, Kevlar, carbon, boron, silicon carbide, and born carbide fibers **Applications of Composites**: Automobile, Aircrafts, Missiles, Space hardware, Electrical and Electronics, Marine, recreational and sports equipment, future potential of composites.	9	20MEE562.1, 20MEE562.2
2	**Fiber Reinforced Plastic Processing**: Layup and curing, fabricating process, open and closed mould process, hand layup techniques; structural laminate bag molding, production procedures for bag molding **Advanced Processing Techniques**: Filament winding, pultrusion, pulforming, thermo - forming, injection, injection molding, liquid molding, blow molding.	9	20MEE562.2
3	**Fabrication of Composite Structures**: Cutting, machining, drilling, mechanical fasteners and adhesive bonding, joining, computer-aided design and manufacturing, tooling, fabrication of equipment. **Mechanical Properties -Stiffness and Strength:** Geometrical aspects – volume and weight fraction. Unidirectional continuous fibre, discontinuous fibers, Short fiber systems, woven reinforcements –	9	20MEE562.3 20MEE562.6

	Mechanical Testing: Determination of stiffness and strengths of unidirectional composites; tension, compression, flexure and shear		
4	**Metal Matrix Composites**: Reinforcement materials, types, characteristics and selection base metals selection. Need for production MMC's and its application. **Fabrication Process for MMCs**: Powder metallurgy technique, liquid metallurgy technique and secondary processing, special fabrication techniques.	9	20MEE562.3 20MEE562.4
5	**Study Properties of MMC's**: Physical Mechanical, Wear, machinability and Other Properties. Effect of size, shape and distribution of particulate on properties. **Micro Mechanical Analysis of a Lamina**: Introduction, Evaluation of the four elastic moduli by rule of mixture, Numerical problems. Macro Mechanics of a Lamina: Hooke's law for different types of materials, Number of elastic constants, Two - dimensional relationship of compliance and stiffness matrix.	9	20MEE562.5

<h1 style="text-align:center">REFRIGERATAION AND AIR CONDITIONING</h1>

Course Code	20MEE563		Credits	03
L: T:P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE563.1	**The usage, knowledge, skill and competence** in the use of basic concepts of Fluid Mechanics and thermodynamics to conceptualize working of Refrigeration and air conditioning system components.
20MEE563.2	**Examine methodically** and in detail of refrigeration and air conditioning system performance using standards.
20MEE563.3	**Ascertain or establish** various equipment sizing using psychometry calculation.
20MEE563.4	**Apply appropriate engineering techniques/methods** of cooling load calculations for different air conditioning systems based on various applications.
20MEE563.5	**The systematic process of developing a design** of central air conditioning systems by applying the knowledge to practical engineering problems as transmission and distribution of air.
20MEE563.6	**The systematic process of developing a design** of **refrigeration systems** by applying the knowledge to practical engineering problems as cold storage.

Mapping of Course outcomes to Program outcomes:

SMART MATERIALS

Course Code	20MEE564		Credits	03
L: T:P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE564.1	Gain the knowledge on the characteristics of materials such as Metals, Polymers and Ceramics.
20MEE564.2	Analyze the characteristics of Electro, Magneto Rheological fluids and Chromic materials for various mechanical systems.
20MEE564.3	Apply the Electro strictive and Magneto strictive materials in the design of different materials.
20MEE564.4	Evaluate the properties of shape memory alloys with other class of materials and Propose its suitability for a range of applications in Mechanical and Bio medical.
20MEE564.5	Custom and build the smart materials towards the development of smart composites.
20MEE564.6	Select Materials for sensor applications based on required properties.

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

THEORY OF ELASTICITY

Course Code	20MEE565
L: T:P	3:0:0
Exams Hours	03

Credits	03
CIE Marks	50
SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE565.1	Understand Generalized Hooke's Law to analytically approach the strength and deformation related problems of various structures.
20MEE565.2	Analyze elastic deformation problems for homogeneous isotropic materials and anisotropic materials which are the basis of mechanical engineering design.
20MEE565.3	Apply the compatibility equations to solve 2D Static loading problems in Cartesian and polar coordinate systems.
20MEE565.4	Visualise the transition to plastic deformation from elastic deformation.
20MEE565.5	Evaluate the behavioral effect of temperature on thermo elastic materials
20MEE565.6	Understand the general solution to Torsion problems based on St. Venant's Approach.

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

MEE63.6	3	3		3										3

Ratings: 3 for high, 2 for substantial, 1 for low. To be followed in mapping.

Module No	Contents of Module	Hrs.	
1	BASIC EQUATIONS OF ELASTICITY Concept of stress and strain, stress and strain transformation, principal stresses, and strain in 3D with their invariants, equilibrium equation, compatibility equation. Generalized Hooke's law, Mohr's circle for 2D analysis of stress and strain, Numerical examples.	9	**20MEE565.1**
2	TWO DIMENSIONAL PROBLEMS IN CARTESIAN COORDINATE SYSTEM Plain stress and plain strain, relation between plain stress and plain strain, Airy's stress functions. Problems on Airy's Stress function for bending of a narrow cantilever beam of rectangular cross section under edge load, pin ended beam under uniform load, Numerical examples.	9	**20MEE565.2**
3	TWO DIMENSIONAL PROBLEMS IN POLAR COORDINATE SYSTEM Airy's stress functions. Problems on Airy's Stress function for Axis-symmetric problems -thick cylinder under uniform internal and / or external pressure(Lame's problem), rotating discs of uniform thickness-solid disk and circular disc with hole, Stress in composite tubes(shrink fit).	9	**20MEE565.3**

4	TORSION OF PRISMATIC BARS General solution of the torsion problem (Saint –venant), torsion of circular, elliptic and triangular cross sections. Prandtl's membrane analogy, torsion of thin open sections and thin tubes. Numerical examples.	9	**20MEE565. 4** **20MEE565. 6**
5	Thermal Stresses: Thermo elastic stress strain relationship, Equations of equilibrium Thermal stresses in thin circular discs and in long circular cylinder, sphere. Numerical examples.	8	**20MEE565. 5**

Industrial Internet of Things – Embedded Systems

Code: 20MEE566
Credits: 03
L: P: T : 3:0:0   **CIE Marks: 50**
Exam Hours: 03   **SEE Marks: 50**

COURSE OUTCOMES: At the end of the Course, the Student will be able to:

20MEE566.1	Understand the fundamentals of software Testing and Software Testing Tools.
20MEE566.2	Apply the concept of Embedded System for its Software development.
20MEE566.3	Analyse the Linux operating system and Wi-Fi for raspberry pi.
20MEE566.4	Enable to configure various Sensors and Actuators, Memory, Communication Interface I2C
20MEE566.5	Discuss the Architecture and features of Raspberry Pi and become familiar with the design aspects of I/O and Memory Interfacing circuits.
20MEE566.6	Use modern tools to acquire competency in various storage devices and apply the knowledge gained in designing websites.

COURSE OUTCOMES: At the end of the Course, the Student will be able to:

20MEL51.1	Synthesis the Inversions of mechanisms for different motion transfer scenarios.
20MEL51.2	Analyze the velocity and acceleration of mechanisms and machines in operating conditions.
20MEL51.3	Determine the causes and solutions for Unbalance in rotary components of different machines.
20MEL51.4	Apply the Principles of statics and dynamics in understanding the behavior of machines and mechanisms.
20MEL51.5	Illustrate the inertial parameters and variables which affect the performance of Governors.
20MEL51.6	Investigate the effects of Gyroscopic couple on different applications involving Prime movers.

HEAT POWER CYCLES LAB

Course Code	20MEL52		Credits	01
L: T:P	0:0:1		CIE Marks	25
Exams Hours	03		SEE Marks	25

COURSE OUTCOMES: At the end of the Course, the Student will be able to:

20MEL52.1	Identify the working of petrol and diesel engines and to develop heat balance sheet.
20MEL52.2	Apply the first and second law of thermodynamics to gas turbines and IC Engines to obtain efficiencies.
20MEL52.3	Describe the characteristics of gas power, vapor power & Brayton cycles and investigate ways to increase the thermal efficiency
20MEL52.4	Development of enhanced thermal systems by minimizing the constraints which enables the student to have continuous learning
20MEL52.5	Evaluate the performance of various refrigeration cycles and review factors involved in selection of right refrigerant for an application.
20MEL52.6	Use the psychrometric chart as a tool to determine the properties of atmospheric air.

SIXTH SEMESTER SYLLABUS

FUNDAMENTALS OF HEAT TRANSFER

Course Code	20MEE61		Credits	03
L: T:P	2:1:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE61.1	Apply heat transfer principles to design and evaluate the performance of thermal systems in order to minimize the heat loss
20MEE61.2	Formulate the steady state conduction equations for one dimensional heat transfer systems like Fins, Lumped systems and develop the solution for the temperature distributions within the body
20MEE61.3	Design and apply the concepts of radiation shield system in preventing harmful radiations in power plants.
20MEE61.4	Development of enhanced thermal systems as a team by minimizing the constraints which enables the student to have continuous learning
20MEE61.5	Analyse the complex engineering problems in convection heat transfer and also use computational tools to design heat exchangers.
20MEE61.6	Design and develop the eco friendly Condensing and heat exchange equipments so as to optimize the heat flow. .

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

MEE61.4	3													
MEE61.5	3	3			2									3
MEE61.6	3		3				2							3

Ratings: 3 for high, 2 for substantial, 1 for low. To be followed in mapping.

Module No.	CONTENT	Hrs.	CO's
1	**Introduction to Concepts And Definitions:** Modes of heat transfer: Basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity; convective heat transfer coefficient; radiation heat transfer; combined heat transfer mechanism. Boundary conditions of 1st, 2nd and 3rd kind (Numerical Problems) **Conduction:** Derivation of general three-dimensional conduction equation in Cartesian coordinate and its special cases, discussion on 3-D conduction in cylindrical and spherical coordinate systems (No derivation). One dimensional conduction equation in rectangular, cylindrical and spherical coordinates for plane and composite walls. (No	10	**20MEE61.1, 20MEE61.6**

	Derivations only Numerical Problems). Thermal contact resistance (Numerical Problems). Introduction to Insulating materials, types and selecting criteria of insulating material, R value of insulation. Critical thickness of insulation without heat generation (Numerical Problems) **Heat transfer in extended surfaces:** Heat transfer in extended surfaces of uniform rectangular cross-section without heat generation, Long fin, and short fin with insulated tip and without insulated tip and fin connected between two heat sources. Fin efficiency and effectiveness. Numerical Problems		
2	**Transient Conduction:** Lumped system analysis, Use of Transient temperature charts (Heisler's charts) for transient conduction in slab, long cylinder and sphere; use of transient temperature charts for transient conduction in semi-infinite solids. Numerical Problems. Computational Heat Transfer: Finite Difference Formulation of Differential Equations, 1D steady state heat conduction, boundary conditions and analysis. 2D steady state heat transfer, boundary nodes, irregular boundaries. Transient heat conduction in plane wall.	8	**20MEE61.2, 20MEE61.6**
3	**Free or natural convection:** Application of dimensional analysis for free convection, use of correlations of free convection in vertical, horizontal and inclined flat plates, vertical and horizontal cylinders and spheres, Numerical problems. **Forced Convections:** Applications of dimensional analysis for forced convection. Use of various correlations for hydro dynamically and thermally developed flows inside a duct, use of correlations for flow over a flat plate, over a cylinder and sphere. Numerical problems.	8	**20MEE61.3, 20MEE61.5, 20MEE61.6**
4	Radiation Heat Transfer: Thermal radiation; definitions of various terms used in radiation heat transfer. Basic Laws: Stefan-Boltzmann law, Kirchoff's law, Planck's law and Wein's displacement law, Lambert's law.Radiation Intensity, Solid angle, Spectral Quantities, Radiosity. Radiation heat exchange between two parallel infinite black surfaces,betweentwoparallelinfinitegraysurfaces;effectofradiationshield;intensityof radiation and solid angle; radiation heat exchange between two finite surfaces configuration factor and view factor, View Factor Relations. Numerical problems.	7	**20MEE61.2, 20MEE61.6**

5	**Condensation And Boiling:** Types of condensation (discussion only) Nusselt's theory for laminar condensation on a vertical flat surface; use of correlations for condensation on vertical flat surfaces, horizontal tube and horizontal tube banks; Reynolds number for condensate flow; regimes of pool boiling, pool boiling correlations. Numerical problems. **Heat Exchangers:** Classification of heat exchangers; Requirements, Design and selection and practical application of Heat exchangers, Temperature profiles of Heat exchangers. Overall heat transfer coefficient, fouling and fouling factor; LMTD, Effectiveness-NTU methods of analysis of heat exchangers. Numerical problems. Introduction to the concepts of Micro, Nano and PCB type heat exchangers.	11	20MEE61.4, 20MEE61.6

FINITE ELEMENT METHODS

Course Code	20MEE62		Credits	03
L: T:P	2:1:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE62.1	Understand the concept of FEM, FE procedure, Interpolations, paraphrase numerical methods.
20MEE62.2	Evaluate the stress and desirable characteristics of one dimensional element.
20MEE62.3	Analyze the problem for applying boundary conditions for 2-D elements
20MEE62.4	Implement the formulation techniques to solve two-dimensional problems using triangle and quadrilateral elements.
20MEE62.5	Able to apply suitable boundary conditions to a global equation for trusses and beams.
20MEE62.6	Evaluate dynamics problems using FEM and Eigen values given applications

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PSO2

Ratings: 3 for high, 2 for substantial, 1 for low. To be followed in mapping.

Module No	Contents of Module	Hrs	Cos
1	**Introduction to Finite Element Methods:** Engineering Analysis, Basic Concept, Historical background, General and Engineering applications of the FEM, Advantages, Classification, Basic steps, Types of elements based on Geometry, bandwidth, Variation formulations using Rayleigh Ritz method and weighted residual methods. Basic Equations and Potential Energy Functional, **Interpolation Models**: Introduction, Polynomial form of interpolation function, Simplex, Complex, and Multiplex elements, Interpolation polynomial in terms of nodal DOF, Selection of the order of the interpolation polynomial, Convergence requirements, coordinate systems.	9	20MEE 62.1
2	**Derivations and solutions for 1-D Bar Element**: Types, Quadratic element, 2 Noded elements: Strain Displacement matrix, Shape functions and its properties, Strain matrix, Element equations, Types of forces, Assembly Procedure **Displacement Methods**: Definition and derivation of Stiffness matrix, Problems on various boundary conditions, Homogeneous and Non Homogeneous. Properties of a stiffness matrix. **Quadratic element**: Strain– Displacement matrix, element stiffness matrix, Element force vector. Temperature effects. Problems	9	20MEE 62.2

3	**Two-Dimensional Elements-Analysis, Applications and Problems:** Pascal's Triangle, Three-Noded Triangular Element (TRIA 3), Four-Noded Quadrilateral Element (QUAD 4), Shape functions for Higher Order Elements (TRIA 6, QUAD 8). Basic Equations and Potential Energy Functional, Lagrange family. Shape functions for Higher Order Elements;area coordinates Isoparametric representation, Jacobian matrix, Strain- displacement matrix, Element stiffness, force term. Problems	9	**20MEE 62.3 20MEE 62.4**
4	**Structural analysis through FEM for Beams and Trusses:** **Beams:** 2-Noded beam element**,** Finite element formulation, load vector-point load, UDL, shear force and bending moment, Deflection equation, shape functions and stiffness matrixes. **Trusses:** Includes study of problems with one, two, three and four bar elements, Equation of truss, stiffness matrix derivation, and assumptions.	9	**20MEE 62.5**
5	**FEM for Dynamic:** System of springs, Formulation for point mass and distributed masses, Consistent element mass matrix of one dimensional bar element, truss element, quadrilateral element, beam element. Lumped mass matrix, Evaluation of Eigen values and Eigen vectors, Applications to bars, stepped bars, and beams,	8	**20MEE 62.6**

DESIGN OF MACHINE ELEMENTS 2

Course Code	20MEE63		Credits	04
L: T: P	3:1:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

	COURSE OUTCOMES
20MEE63.1	Analyze the stresses included in the curved beams, cylinder and cylinder heads using design standards.
20MEE63.2	Design ropes, chains, and springs with the aid of design data handbook.
20MEE63.3	Gain knowledge on surface failure subjected to different types of wear.
20MEE63.4	Realize the importance of lubricants and their properties towards the design of bearing elements.
20MEE63.5	Recommend the adequate surface hardness for bevel and worm gears with detailed design subjected to static and dynamic loading conditions.
20MEE63.6	Design different types of cutches and breaks based on the loading conditions

Mapping of Course outcomes to Program outcomes:

FUNDAMENTALS OF TRIBOLOGY

Course Code	20MEE641		Credits	03
L: T: P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE641.1	Understand the basics of Tribology, Wear mechanism & Friction	
20MEE641.2	Evaluate Hagen's Poiseuille's theory & Reynolds's equation	
20MEE641.3	Analyze the characteristics of idealized journal bearing and slider bearings.	
20MEE641.4	Apply the concepts of Hydrostatic Lubrication and Hydrodynamic Lubrication	
20MEE641.5	Remember the laws of friction with respect to bearings.	
20MEE641.6	Know the different types and properties of bearing materials and Characterize the behavior of Tribological components	

Mapping of Course outcomes to Program outcomes:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
20MEE51.1		3					3							3
20MEE51.2	3												3	
20MEE51.3		3		1										3
20MEE51.4	3												3	3
20MEE51.5													3	
20MEE51.6	3					1	3						3	

Module No	Contents	Hr's	CO's
1	**Introduction:** Bearings, Friction, Wear and its phenomena , Lubrication, Boundary Lubrication, Film Lubrication, Absolute Viscosity, Newton's Law of viscosity, Hagen- Poiseuille's Law, Flow between parallel stationary planes, viscosity measuring apparatus. Lubrication principles, classification of lubricants. **surface interaction and friction**: Topography of Surfaces – Surface features-Properties and measurement – Surface interaction – Adhesive Theory of Sliding Friction ——Thermal considerations in sliding contact.	09	20MEE641.1, 20MEE641.2
2	**Idealized Journal Bearing:** Introduction to idealized journal bearing, load carrying capacity, condition for equilibrium, Sommerfeld's numbers and significance of it; numerical problems. **Slider / Pad Bearing With A Fixed Shoe:** Pressure distribution, Load carrying capacity, coefficient of friction, frictional resistance in a pivoted shoe bearing, numerical examples	09	20MEE641.3

		Hydrodynamic Lubrication: Friction forces and power loss in lightly loaded bearing, Petroff's law, Tower's experiments, numerical, mechanism of pressure development in an oil film, Reynold's equation in 2D.		20MEE641.4
4		Friction – Laws of friction - Stick-slip phenomenon- Friction characteristics of metals and non-metals - Adhesion and Ploughing theory of friction **Antifriction Bearings:** Introduction, Advantages and selection of Bearings, Selection Procedure, life rating of Antifriction Bearings, Rigidly and load on Roller bearing supported units, Load bearing capacity, Preloaded bearings, Radial and Axial Rigidity of spindle supports for various types.	09	20MEE641.5
5		**Bearing Materials:** Commonly used bearings materials, properties of typical bearing materials. Advantages and disadvantages of bearing materials **Behaviour of Tribological Components:** Selection of bearings, Plain bearings, Gears, Wire ropes, Seals and packings, Conveyor belts, Wear of ceramic materials, wear measurements, effects of speed, temperature and pressure.	08	20MEE641.5, 20MEE641.6

.

20MEE642.3	3	2	3											3
20MEE642.4	3			1										3
20MEE642.5	3				1									3
20MEE642.6	3					1						1		3

Module No	Contents of Module	Hrs	Cos
1	**Scan Conversion and Clipping Representation** of points, lines, Line Drawing Algorithms: DDA algorithm, Bresenham's integer line algorithm, Bresenham's circle algorithm, midpoint line and circle, Polygon filling algorithms: scan conversion, seed filling, scan line algorithm. Viewing transformation, Clipping –points, lines, text, polygon, Cohen-Sutherland line clipping, Sutherland-Hodgmen algorithm.	8	20MEE642.1
2	**Two Dimensional Transformations** Representation of points, Transformations: Rotation, Reflection, Scaling, Combined Transformations, Translations and Homogeneous Coordinates, A geometric interpretation of homogeneous coordinates, Over all scaling, Points at infinity, rotation about an arbitrary point, Reflection through an arbitrary line. **Three Dimensional Transformations** and Projections 3D Transformation matrix: general matrix, Translation, scaling, Shearing, Rotation, Reflection, Multiple transformations, Rotation about an axis parallel to coordinate axis, Rotation about an arbitrary axis in space, Reflection through an arbitrary plane, Orthographic, Parallel projection Transformations, one, Perspective projections- one point, two point and three point.	9	20MEE642.2

3	**Plane and Space Curves** Curve representation, Nonparametric curves, parametric curves, parametric representation and generation of line, circle, ellipse, parabola, hyperbola, generation of circle, ellipse, parabola, hyperbola, Cubic spline, normalized cubic splines, Bezier curves: blending function, properties, generation, B-	9	**20MEE642.3**
	spline curves- Cox-deBoor recursive formula, properties, open uniform basis functions, Non-uniform basis functions, periodic B- spline curve. **Types and Mathematical Representation** of Solids, Solid Models, Solid entities, Solid representation, Solid modeling- set theory, regularized set operations, set membership classification, Half spaces, Half spaces of plane, cylinder, sphere, conical half-space, Boundary representation, Constructive Solid Geometry- basic elements, Building operations.		
4	**Visual Realism-I**: Introduction, hidden line removal- visibility of object views, Visibility techniques: minimax test, containment test, surface test, Silhouttes, Homogeneity test, Sorting, Coherence, Hidden line priority algorithm, Hidden surface removal- Z-buffer algorithm, Warnock's algorithm, Hidden solid removal- ray tracing algorithm. **Visual Realism-II**: Shading, shading models- diffuse reflection, specular reflection, ambient light, Shading surfaces- constant shading, gourmand shading, Phong shading, Shading enhancements, Shading Solids- Ray tracing for CSG, z- buffer algorithm for B-rep and CSG, octree encoded objects, Colouring- RGB, CMY, HSV, HSL colour models.	9	**20MEE642.4**
5	**Computer Animation:** Introduction, Conventional animation-key frame, Inbetweening, Line testing, Painting, Filming, Computer animation entertainment and engineering animation, Animation system hardware, software architecture, Animation types- frame buffer, colour table, zoompan- scroll, cross bar, real time play back, Animation techniques-key frame, skeleton. Path of motion and p-curves.	9	**20MEE642.5,6**

NANO TECHNOLOGY

Course Code	20MEE651		Credits	03
L: T: P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: at the end of the course, the students will be able to:

20MEE651.1	Understand characterization and properties which provide an overview of nanostructures evincing their fascinating properties unseen otherwise.
20MEE651.2	Analyse materials from nano to macro length scale, and its adoption in nature (bio mimicking) will also be emphasized.
20MEE651.3	Demonstrate the ability to read and analyze current engineering methodologies to determine various methods and techniques used in nano technology.
20MEE651.4	The student will demonstrate approaches to engineering nano materials and nano structures.
20MEE651.5	To learn about nano sensors and their applications in mechanical, electrical, electronic, magnetic, chemical field.
20MEE651.6	Understand the importance of nano machines.

Mapping of Course outcomes to Program outcomes:

FRACTURE MECHANICS

Course Code	20MEE652		Credits	03

L: T: P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEE652.1	Apply the basic concepts of Fracture Mechanics in engineering design and manufacture for brittle and ductile materials.
20MEE652.2	Acquire knowledge on different modes of crack propagation and analyze the plane stress and plane strain condition.
20MEE652.3	Investigate the difference between Linear Elastic Fracture Mechanics and Elastic Plastic Fracture Mechanics in the field of engineering. .
20MEE652.4	Design the different types of specimen for fatigue and fracture analysis.
20MEE652.5	Evaluate CTOD by using different methods of FM approach, and analyze by using analysis software.
20MEE652.6	Conduct investigations on various NDT methods to determine the fracture, crack and flaws in the materials.

Mapping of Course outcomes to Program outcomes:

20MEE652.6				2									1	

Module No	Contents of Module	Hrs	Cos
1	**Fracture Mechanics Principles:** Introduction, Mechanisms of Fracture, a crack in structure, the Griffith's criterion, modern design – strengths, stiffness and toughness. Stress intensity approach **Stress Analysis For Members With Cracks:** Linear elastic fracture mechanics, Crack tip stress and deformations, Relation between stress intensity factor and fracture toughness, Stress intensity based solutions. Crack tip plastic zone estimation, Plane stress and plane strain concepts. Dugdale approach, Spectacular Failures-Discussion on Boston molasses failure, Liberty ship failure, Ductile-brittle transition temperature and its relevance	9	20MEE652.1 20MEE652.3 20MEE652.6

2	**Elastic – Plastic Fracture Mechanics: I**ntroduction, Elasto–plastic factor criteria, crack resistance curve, J-integral, Crack opening displacement, crack tip opening displacement. Importance of R- curve in fracture mechanics, The use of Crack Tip Opening Displacement (CTOD) criteria. Experimental determination of CTOD. Parameters affecting the critical CTOD.	9	**20MEE652.2** **20MEE652.5**
3	**Dynamic And Crack Arrest:** Introduction, the dynamic stress intensity and elastic energy release rate, crack branching, the principles of crack arrest, the dynamic fracture toughness.Comparison of crack growth and critical value of K by MTS and SED **Fatigue And Fatigue Crack Growth Rate:** Fatigue loading, various stages of crack propagation, the load spectrum, approximation of the stress spectrum, the crack growth integration, fatigue crack growth laws.Paris Law and Sigmoidal Curve, crack clouser	9	**20MEE652.2** **20MEE652.3** **20MEE652.6**
4	Fracture Resistance Of Materials: Fracture criteria, fatigue cracking criteria, effect of alloying and second phase particles, effect of processing and anisotropy, effect of temperature, closure. Computational Fracture Mechanics: Overview of numerical methods, traditional methods in computational fracture mechanics – stress and displacement marching,	8	**20MEE652.4** **20MEE652.6**
5	Fracture Toughness Testing Of Metals: Specimen size requirements, various test procedures, effects of temperature, loading rate and plate thickness on fracture toughness. Fracture testing in shear modes, fatigue testing, NDT methods,NASGRO, AFGROW, Summary of empirical fatigue crack growth models, Crack initiation, Intrusion and extrusion, Evidence of slip bands.	9	**20MEE652.4** **20MEE652.6**

COMPUTATIONAL FLUID DYNAMICS

Course Code	20MEE655		Credits	03
L: T: P	3:0:0		CIE Marks	50
Exams Hours	03		SEE Marks	50

Course Outcomes: At the end of the Course, the Student will be able to do the following:

20MEE655.1	Understand in-depth introduction to the methods and analysis techniques used in computational solutions of fluid mechanics and heat transfer problems.
20MEE655.2	Demonstrate experience in the application of CFD analysis to real Engineering designs.
20MEE655.3	Apply the knowledge to Model problems and to study the interaction of physical processes and numerical techniques.
20MEE655.4	Analyze Contemporary methods for boundary layers, incompressible viscous flows, and inviscid compressible flows are studied.
20MEE655.5	Design problems using proper turbulence models
20MEE655.6	Solve practical problems related to engineering

-**Mapping of Course Outcomes to Program Outcomes:**

SYLLABUS			
Module No	Contents of the Module	Hours	COs
1	**Introduction To CFD:** CFD ideas to understand, CFD Application, Governing Equations (no derivation) of flow; continuity, momentum, energy. Conservative & Non- conservative forms of equations, Integral vs. Differential Forms of Equations. Form of Equations particularly suitable for CFD work. Shock capturing, Shock fitting, Physical Boundaryconditions**.**	9	20MEE655.1

2	**Mathematical Behavior of Partial Differential Equations and Discretization:** Classification of partial differential equations and its Impact on computational fluid dynamics, Essence of discretization, order of accuracy consistency of numerical schemes, Lax's Theorem, convergence, Reflection Boundary condition, case studies on PDE	9	20MEE655.2
3	Mathematical Behavior of Partial Differential Equations and Discretization: Higher order Difference quotients. Explicit & Implicit Schemes, Error and analysis of stability, Error Propagation, Stability properties of Explicit & Implicit schemes. Solution Methods ofFinite Difference Equations: Time & Space Marching, Alternating Direction Implicit (ADI) Schemes. Relaxation scheme, Jacobi and Gauss-Seidel techniques, Lax- Wendroff first order scheme, Lax- Wendroff with artificial viscosity	9	20MEE655.3
4	**Grid Generation:** Structured Grid Generation: Algebraic Methods, PDE mapping methods, use of grid control functions, Surface gridgeneration, Multi Block Structured grid generation, overlapping and Chimera grids. Unstructured Grid Generation: Delaunay-Vuronoi Method, advancing front methods (AFM Modified for Quadrilaterals, iterative paving method, Quadtree&Octree method).**Adaptive Grid Methods:** Multi Block Adaptive Structured Grid Generation, Unstructured adaptive Methods. Mesh refinement methods, and Mesh enrichmentmethod.	9	20MEE655.4 20MEE655.6
5	**Finite Volume Techniques:** Finite volume Discretisation-Cell Centered Formulation, High resolution finite volume upwind scheme Runge-Kutta stepping, Multi-Step Integration scheme.Cell vertex Formulation. **Application to Turbulence**- Models,Large eddy simulation, Direct Numerical Solution,Post- processing and visualization, Journal based on application to turbulence,ANSYS flow analysis report on symmetric and camberedaerfoil.	8	20MEE655.5 20MEE655.6

FUNDAMENTALS OF HEAT TRANSFER LAB

Course Code	20MEL61		Credits	01
L:T:P	0:0:1		CIE Marks	25
Exams Hours	03		SEE Marks	25

COURSE OUTCOMES: At the end of the course, the students will be able to:

20MEL61.1	Apply the concept of steady state heat conduction in analytical and numerical method to determine the temperature distributions and heat flux in metal rod and composite wall.
20MEL61.2	Formulate the conduction equations for one dimensional heat transfer systems like Fins, Lumped systems and develop the solution for the temperature distributions within the body,
20MEL61.3	Analyze the black body concept of radiation to determine the emissivity and Stefan boltzman constant
20MEL61.4	Analysis of 1D and 2D Thermal problems solving Conduction and Convection Boundary conditions
20MEL61.5	Analyze the free convection and forced convection heat transfer in a duct and vertical flat plate.
20MEL61.6	Determination of LMTD, effectiveness and heat transfer coefficient for heat exchanger and analyze the concept boiling and condensation.

FINITE ELEMENT METHODS LAB

Course Code	20MEL62		Credits	01
L:T:P	0:0:1		CIE Marks	25
Exams Hours	03		SEE Marks	25

COURSE OUTCOMES: At the end of the Course, the Students will be able to:

20MEL62.1	Demonstrate the basic features of an analysis package
20MEL62.2	Use the modern tools to formulate the problem, and able to create geometry, descritize, apply boundary condition to solve problems of bars with different loading conditions
20MEL62.3	Able to create geometry, descritize, apply boundary condition to solve problems related to Rectangular plate to find stress with different loading conditions
20MEL62.4	Analysis of truss members to find displacements and stresses with different loading conditions.
20MEL62.5	Demonstrate the deflection of beams subjected to point, uniformly distributed and varying loads further to use the available results to draw shear force and bending moment diagrams
20MEL62.6	Carry out dynamic analysis and finding natural frequencies for various boundary conditions and also analyze with forcing function.

Mapping of CO v/s PO:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PSO2
20MEL62.1		3	3	3	3									3
20MEL62.2		3	3	3	3									3
20MEL62.3		3	3	3	3									3
20MEL62.4		3	3	3	3									3
20MEL62.5		3	3	3	3									3
20MEL62.6		3	3	3	3									3

Course syllabus			
Unit No.	Contents	Hrs	Cos
1	INTRODUCTION TO FEA PACKAGE AND STRESS ANALYSIS.	2	20MEL62.1 20MEL62.2
2	BARS OF CONSTANT CROSS SECTION.	2	20MEL62.2 20MEL62.4
3	BARS OF TAPERED CROSS SECTION AND STEPPED BAR.	2	20MEL62.2 20MEL62.4
4	STRESS ANALYSIS OF A RECTANGULAR PLATE WITH A HOLE	2	20MEL62.3 20MEL62.4
5	PROBLEMS WITH TRUSSES.	2	20MEL62.4 20MEL62.5
6	PROBLEMS WITH TRUSSES.	2	20MEL62.4 20MEL62.5
7	BEAMS: CANTILEVER WITH VARIOUS LOADING CONDITIONS.		20MEL62.4 20MEL62.5
8	BEAMS: SIMPLY SUPPORTED BEAMS WITH DIFFERENT LOADI NG CONDITIONS.	2	20MEL62.4 20MEL62.5
9	DYNAMIC ANALYSIS: 1) FIXED-FIXED BEAM FOR NATURAL FREQUENCY DETERMINATION.	2	20MEL62.6
10	DYNAMIC ANALYSIS OF A BAR SUBJECTED TO FORCING FUNCTION.	2	20MEL62.6

11	DYNAMIC ANALYSIS OF A FIXED-FIXED BAR SUBJECTED TO FORCING FUNCTION.	2	20MEL62.6
